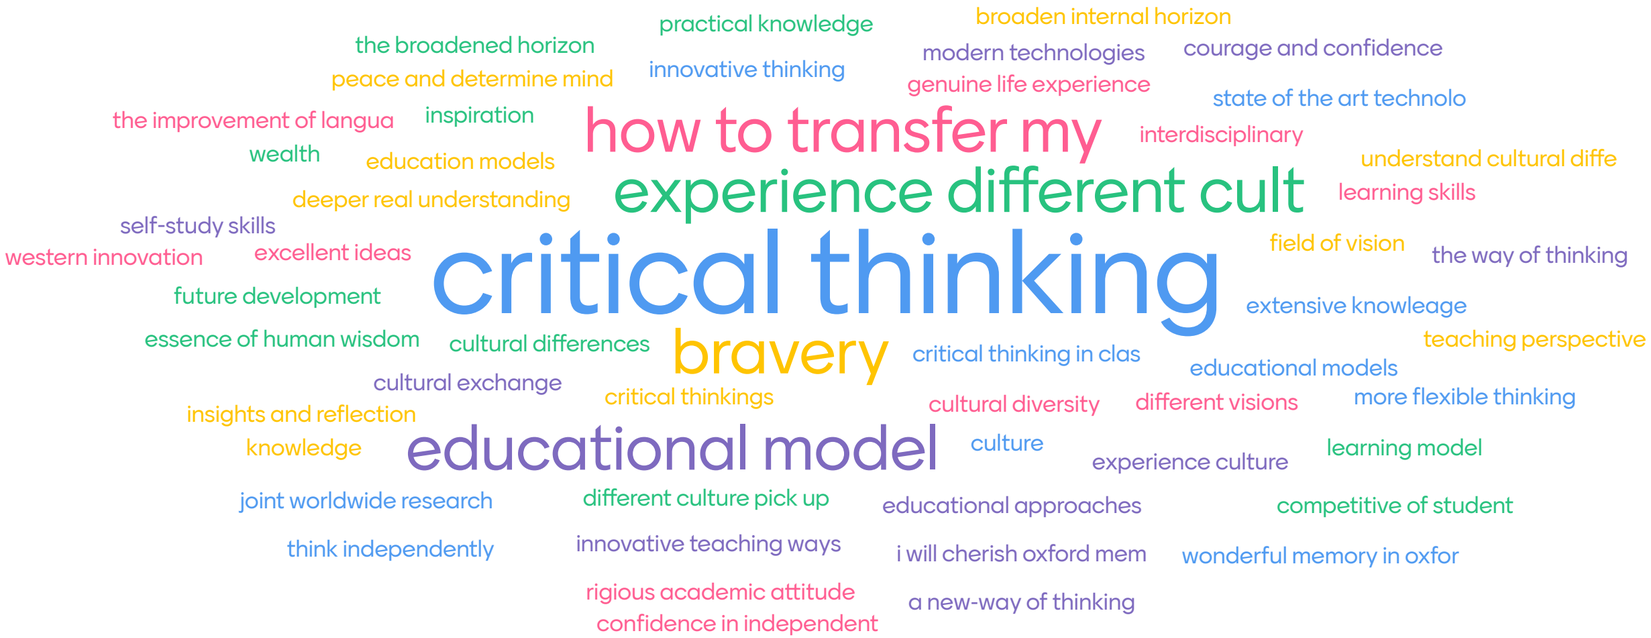
What do you hope to take home from Oxford?



What makes a university "global"?

A university becomes global when it welcomes students and teachers from all countries, carries out worldwide academic cooperation, turns research into international business spin-outs, and lets studen

the students graduated from the school

critical thinking,welcome students from diverse backgrounds to share their opinions with an open mind.

global horizon、Diverse cultures、The way of thinking of different countries make a university global

Internationalization of teachers and students

long history，strong academic achievement

educational model

the inclusive altitude towards different culture

What makes a university "global"?

The globalization of universities is driven by both external global trends and internal institutional strategies.

More inclusive policies in university and attractive teaching method.

Wealth

A global university features international exchanges, global courses and cross-border research.

internationalised curriculum cross-cultural competence and multicultural campus

It attracts students and scholars from all over the world and offers cross-cultural courses

Joint worldwide research

external side, global challenges in science and industry, cross-border labor markets, mutually recognized academic qualifications, and digital technology break geographical barriers for scholar

What makes a university "global"?

I think it is English.I believe language is the foundation of communication learning

it embraces multicultural students

an inclusive campus environment and courses with global vision

A global university hosts international people, builds worldwide academic links, teaches global topics and supports cross-cultural learning.

Worldwide academic partnerships, exchange and overseas research. Global influence on solving international problems.

International exchanges and global perspective in the curriculum

world-class universities like Oxford actively recruit global talent, internationalize their curricula, build cross-border research partnerships

the value of creation

What makes a university "global"?

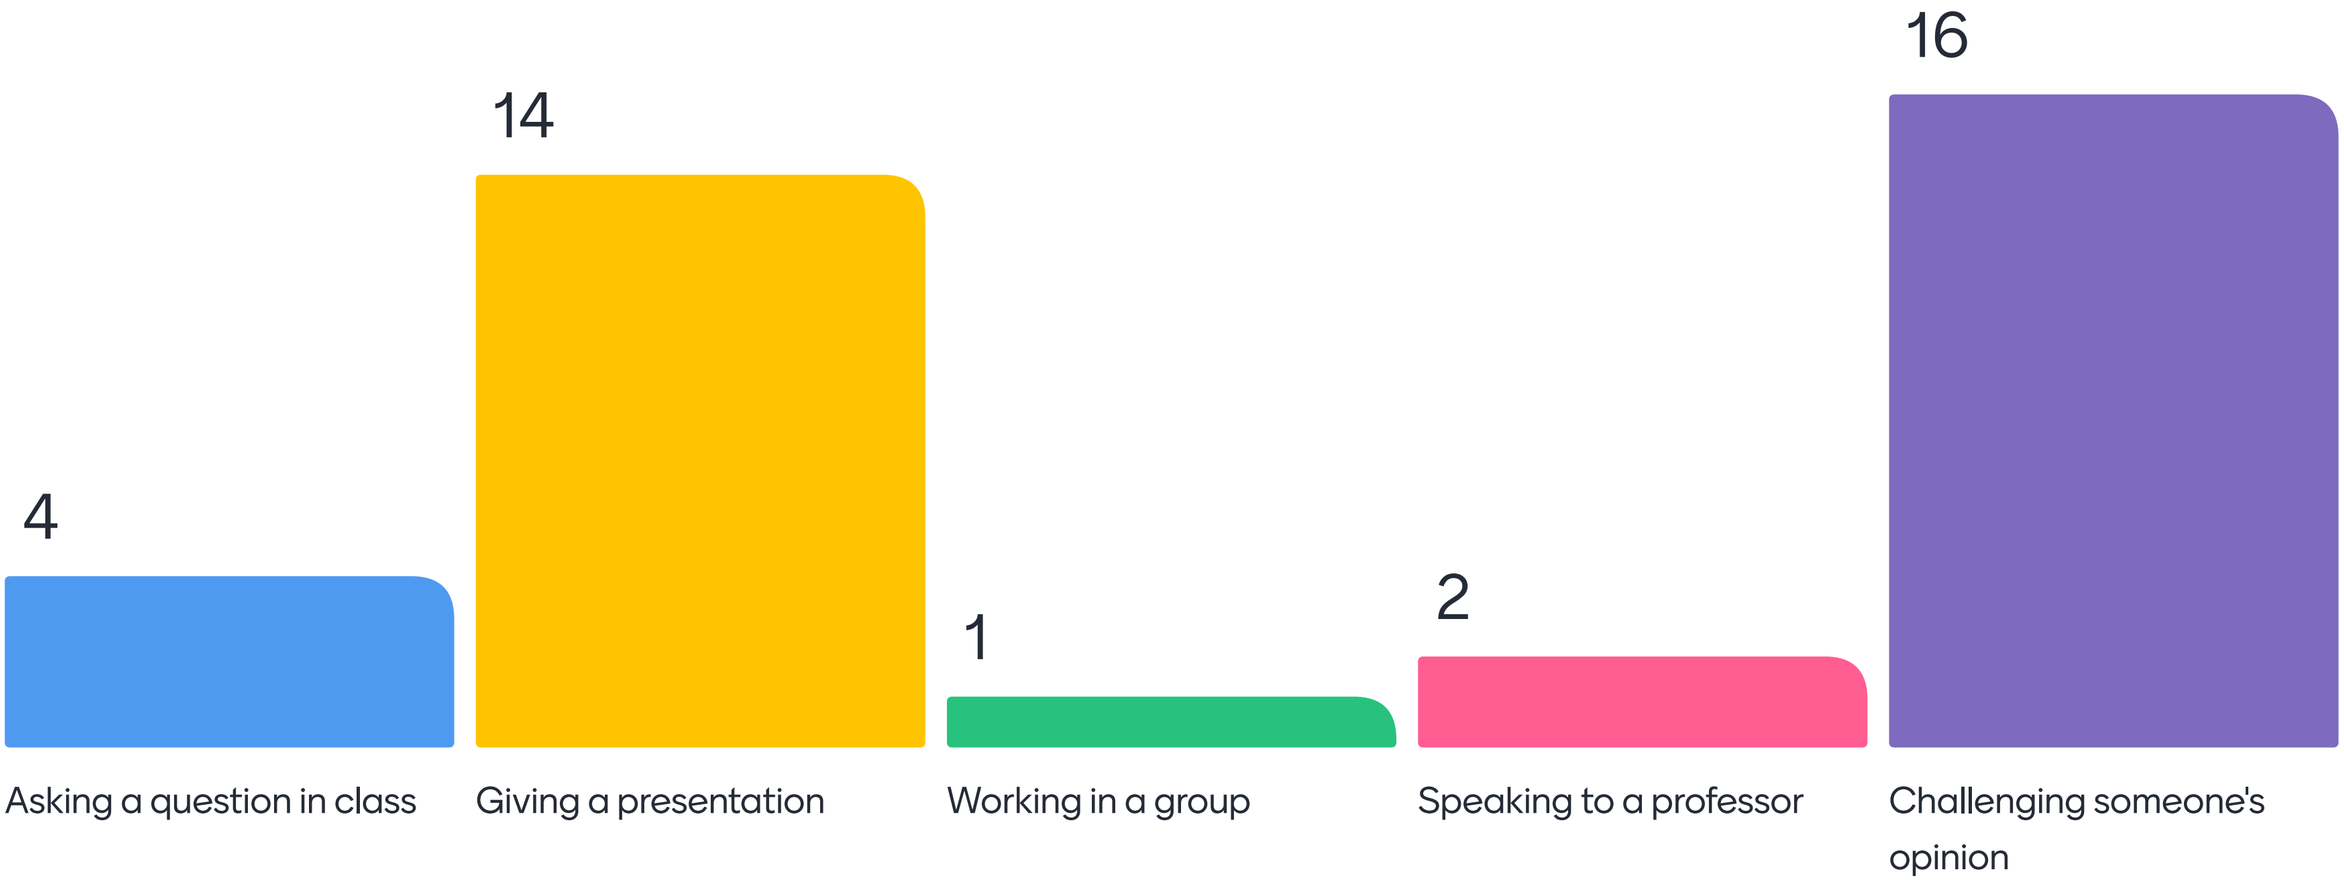
maybe diversity of students or subject, and allows students to have different voices or to questioning the authority

Information Development

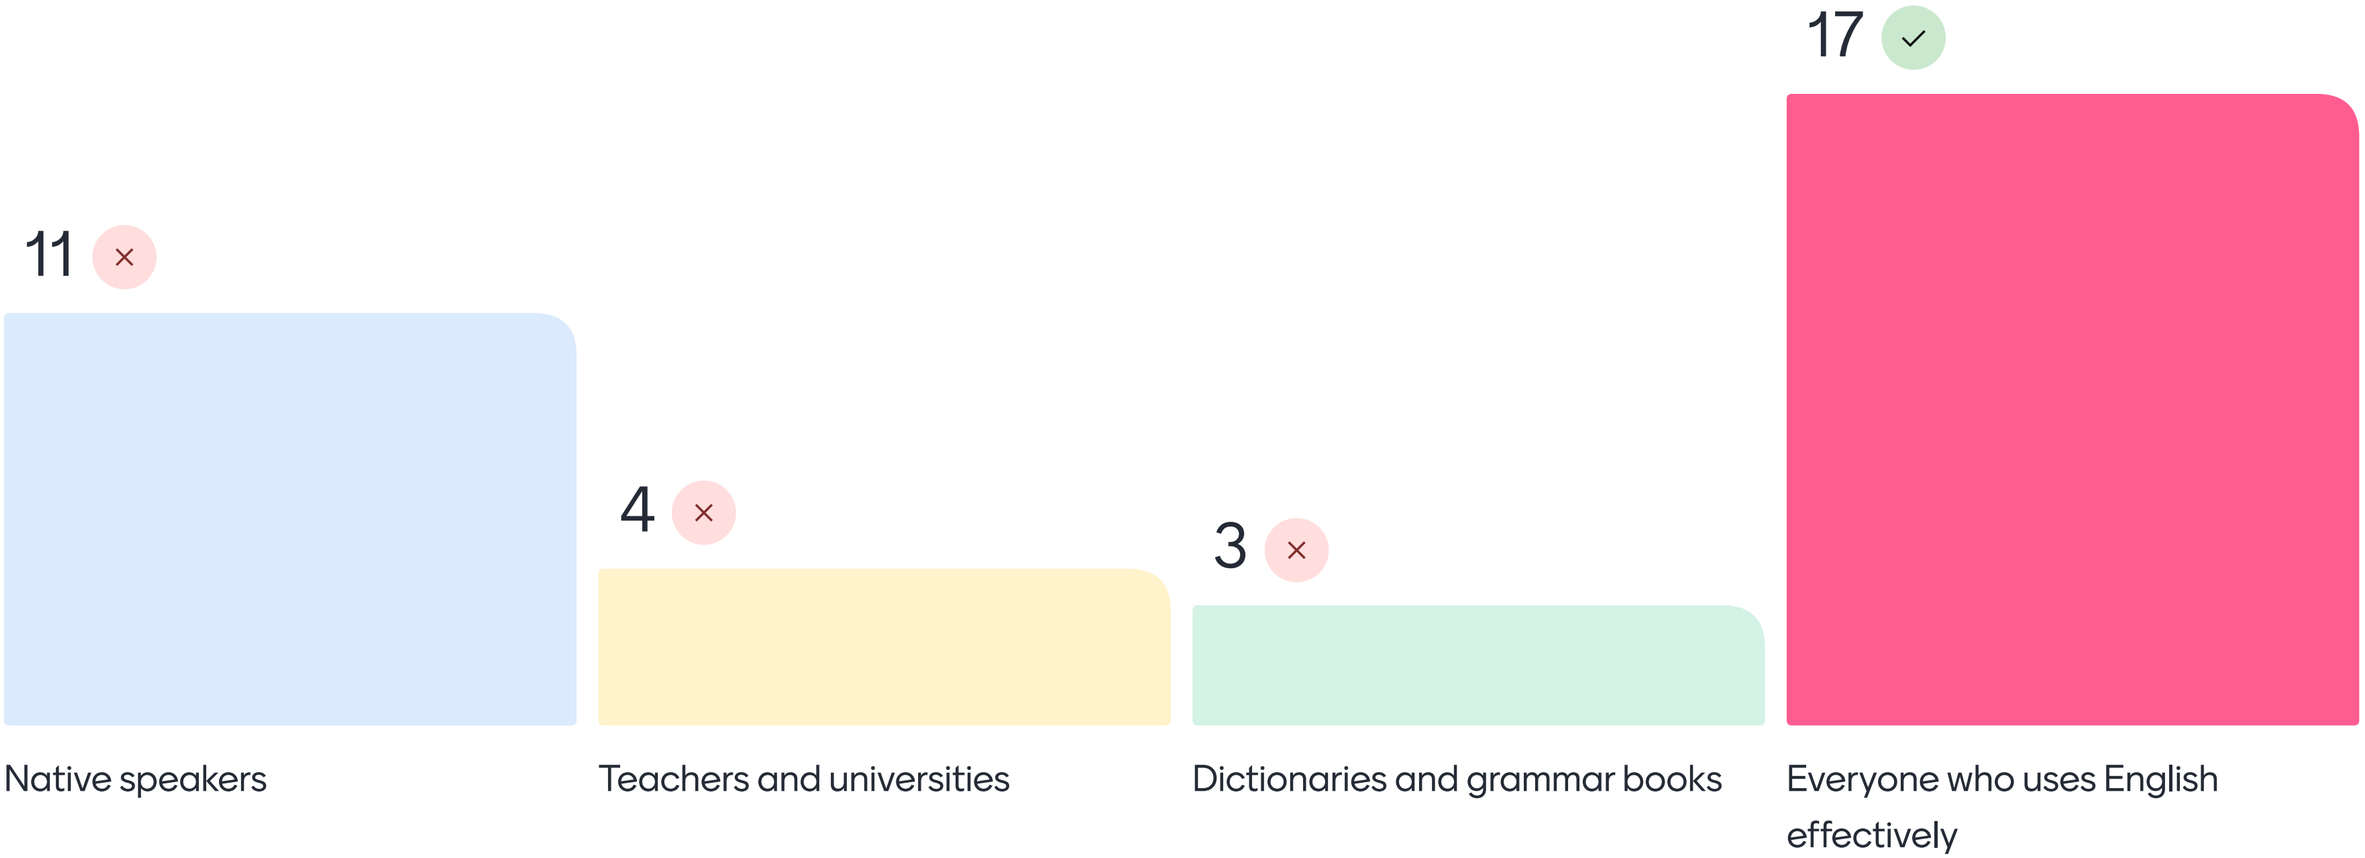
and launch global innovation and exchange programs, integrating global perspectives into education, research and technology commercialization

What makes a university global lies in diverse-culture community, worldwide research partnerships and the vision to cultivate responsible global-minded citizens for our connected world.

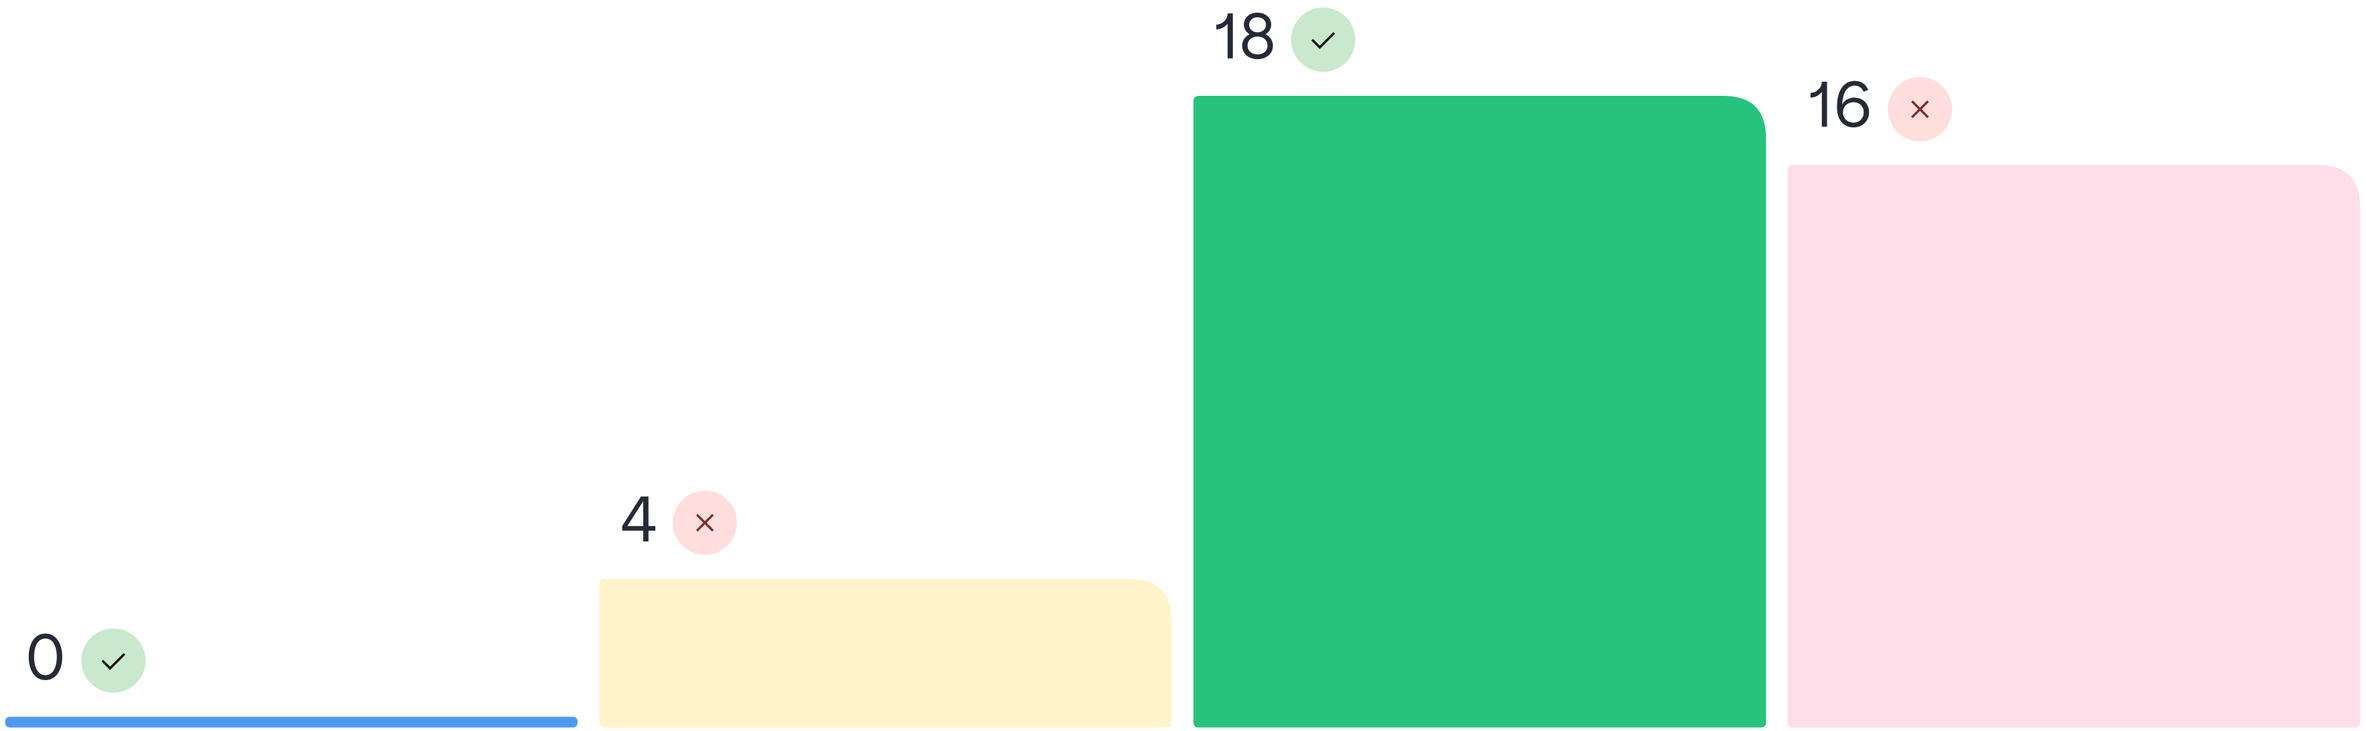
Which of these would make you most nervous?



Who decides what counts as 'good English'?



Which student is showing the strongest critical thinking?



Mei memorises everything the lecturer says.

Ahmed disagrees with every argument he reads.

Sofia asks what evidence supports every claim.

David always has an opinion.

A student tells you, "Using AI always improves essay quality." What would you ask next?

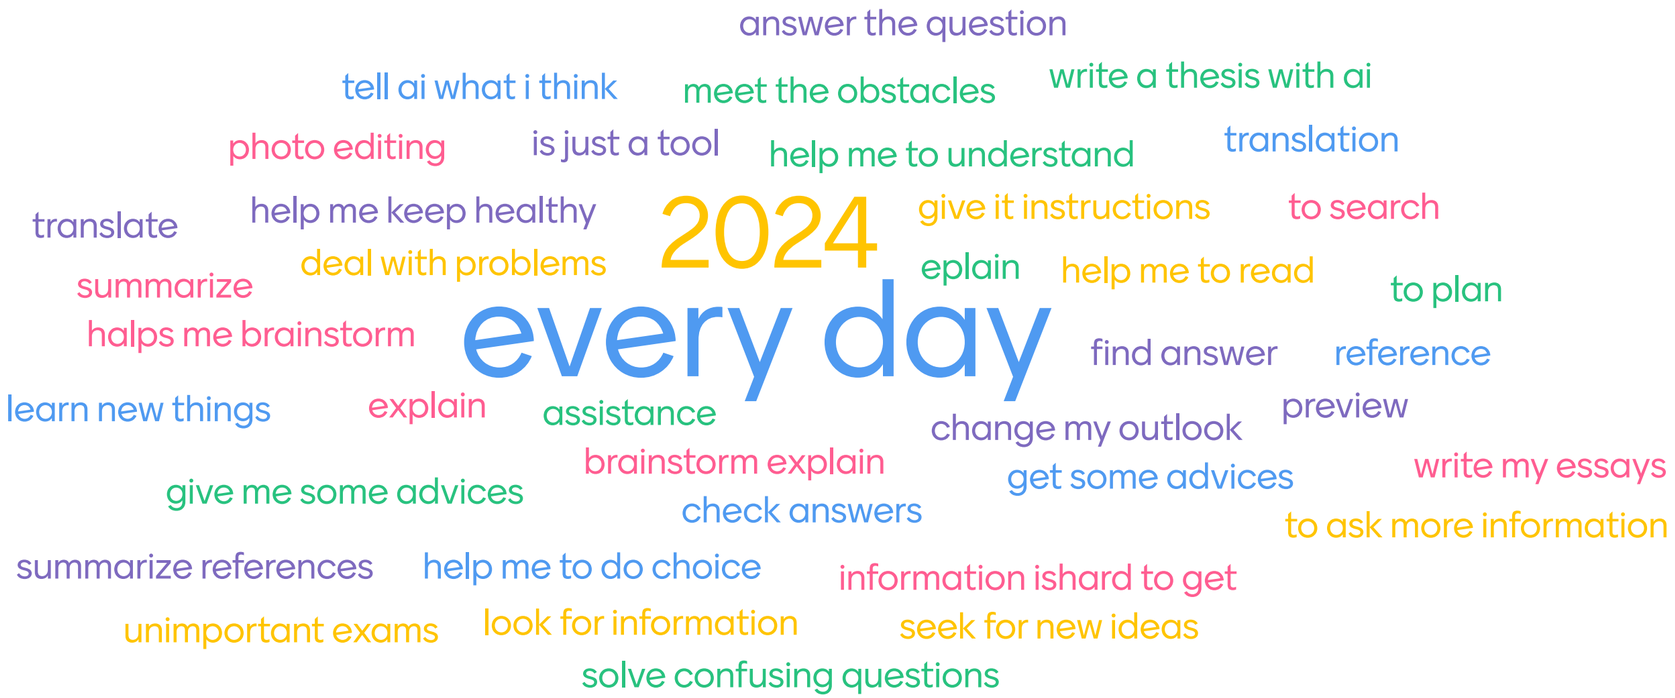
9 "Really?"

0 "Where did you hear that?"

31 "What evidence supports that?"

6 "Has anyone disagreed?"

How do you already use AI when you study?



One idea from today that changed your thinking and/or that you will use in your own studies

Do not be prejudiced in daily life

The classroom belongs to students, and students should fully participate.

use AI correctly and properly

using ai properly and critically

I used to rely heavily on AI for writing. Now I realize I must keep my own brainstorming and literature searching to gain real academic progress.

Like critical thinking , every point need evidences

Don't be afraid to speak English just because your English isn't perfect.

It has changed my attitude towards AI and the way how to use it.

One idea from today that changed your thinking and/or that you will use in your own studies

Trying to raise your hand is the first step to speaking up.

AI should support my learning, not replace my thinking

try to interact more with partners.

I have realized that over-reliance on AI will break my whole learning process. In future studies, I will finish thinking, writing and searching references by myself first, and only use AI for revision

It has changed my attitude towards AI and the way I use it.

i need to cultivate my critical thingking

Critical thinking and thought about AI

The idea that "learning is participating" reshaped my view—it's not passive absorption but active engagement. Through doing, reflecting, and refining, we build deeper

One idea from today that changed your thinking and/or that you will use in your own studies

The way of using AI Be a good participant

The boundary of AI usage matters. I will limit AI to idea inspiration instead of full paper creation to maintain personal academic thinking

Think boldly and don't be afraid of making mistakes. Communicate more interactively and participate in the discussion to learn. Don't be a spectator and a bystander. Use AI rationally.It is just tool.

be outgoing Even if you feel shy and struggle to speak up right now, do not get discouraged — keep working to improve yourself.

Actively participate in class, do not be afraid to express your own opinions, question others' answers, and have your own ideas.Think,think and think.

Critical thinking isn't criticism.We should draw balanced conclusion.

The discussion about AI use reshaped my view. AI can serve as a tool, and I must avoid fully outsourcing reasoning and writing. I will keep independent thinking when I back China.

its seems to my own view like i think that students(especially Chinese students) are missuing ai, the ai deprived their thinkin,thats deadly

One idea from today that changed your thinking and/or that you will use in your own studies

One idea that changed my thinking is what makes effective class participation. I will listen carefully and share thoughtful opinions in future group discussions.

I've learned what qualities it takes to be an outstanding student.And it's impotrant to be open-minded to embrace different ideas.

Use ai responsibly ,connecting with others,being collaborative

Gods Will Be Watching

I will participate in communication more actively， thinking critically， and using AI responsibly.

critical thinking,always be curious and ask why.everyone should has he/her own power of thinking， that's what ditincts us with machine.Man is a thinking reed.

It’s not a bad thing to use AI. However, we should share the results it produces with our teammates and discuss them together.

Use AI to conduct the initial framework organization and term explanations, but never skip the original reading and independent thinking.

One idea from today that changed your thinking and/or that you will use in your own studies

keep individual thinking and just using AI for polishing

as a chemistry teacher ,let my students be agood participates and be open to establish critical thinking

Think about problems using critical thinking， and changed my ways of using ai

Proper use of AI means recognizing that language is a carrier, and learning should be more through practice

The lecture is very helpful to me Before today, I also often used AI to study and complete homework. But I rarely think deeply by myself. I give my brain to AI I will think more by myself
